Quiet Valve Noise Reduction QPL-20

Suitable for washing machines & dishwashers

QPL-20

The Quiet Valve is designed to reduce the noise caused by high velocity water and water hammer. This is achieved by reducing the outlet pressure through the Quiet Valve to an acceptable level.

The use of the Quiet Valve also reduces the risk of burst hoses.

QPL-20

Specifications

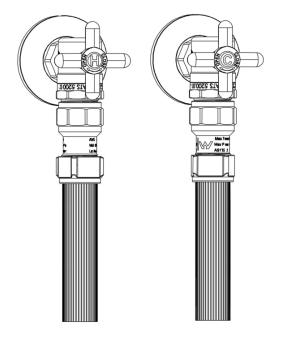

Maximum inlet pressure: 1400 kPa

Maximum temperature: 65°C

Outlet pressure: 400kPa at 700 kPa inlet

Flow rate: 20 litres/min at 700 kPa inlet

Top connection: 20mm (3/4") BSP female 20mm (34") BSP male Outlet connection:

Installation Instructions

STEP 1: Turn off the washing machine tap and unscrew the hose if connected.

STEP 2: Screw the Quiet Valve onto the end of the tap where you removed the hose using the sealing washer provided. NOTE: No thread seal tape is required.

STEP 3: Re - fit the washing machine hose to the Quiet Valve and ensure that the strainer and seal are centrally aligned inside the attaching washing machine nut to prevent any obstruction to the flow.

NOTE: As the Quiet Valve is a pressure and flow restricting device, the cycle times for washing may increase. If the device being protected has both hot and cold inlets connected, then a Quiet Valve may be required on both hot and cold connections.

DISCLAIMER: Every care has been taken in the preparation of these instructions, which have been issued as a guide only. Compliance with the requirements of local Authorities is required at all times. These requirements may change from time to time. Always be aware of the local requirements. Subject to any statutory obligations and manufacturers warranties no liability can be accepted for any losses, consequential or otherwise which may arise or be said to have arisen from relying upon the contents of this installation instruction as to the fitness of any particular product for any particular purpose, use or application.
